

Energy & Commodities Indicative Data

Marex Light Ends

Background

The data is sourced from Marex Spectron, a diversified global financial services platform that operates across 40+ offices worldwide and is recognised as a major liquidity hub in global commodity markets.

The product is composed of Marex's Light Ends data suite, captured by Marex's Energy desks across global gasoline markets.

This data product is composed of eleven instruments that cover key Light Ends benchmarks such as RBOB, Eurobob Oxy, Singapore Mogas 92, Med gasoline, interregional arbitrage spreads, and refined product differentials: all essential for understanding gasoline pricing structures and global product flows.

Light Ends datasets are highly valuable because Light Ends oil markets are volatile, globally interconnected, and sensitive to refinery configurations, seasonal demand, and regional supply imbalances. This makes Realtime broker sourced pricing crucial for accurate crack modelling, arbitrage detection, blending economics, and hedging strategies.

It is designed for traders, refiners, risk managers, and analytics teams who require granular, high integrity pricing to navigate the fastmoving gasoline and naphtha markets for operational and riskmanagement processes.
